This is a free addition to the project "Default City Pack 1 industrial" which was originally made for HDRP

This asset is an addition, intended for the URP project

The asset includes additional textures and converted materials for URP
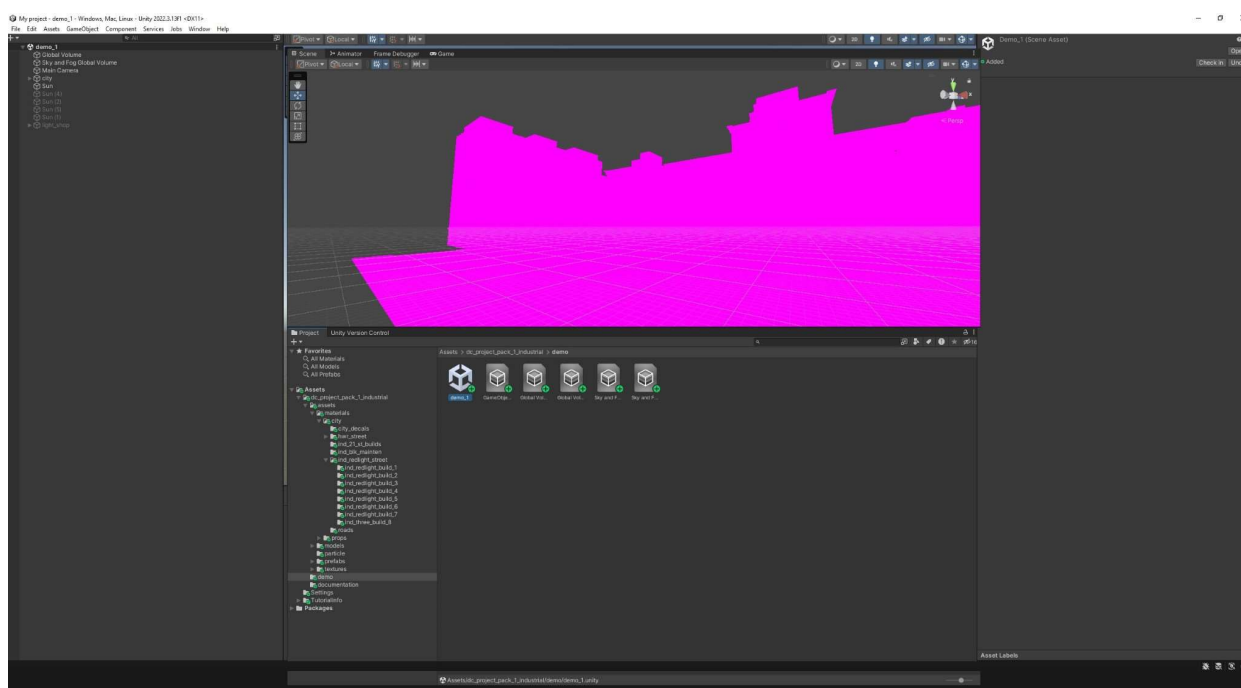

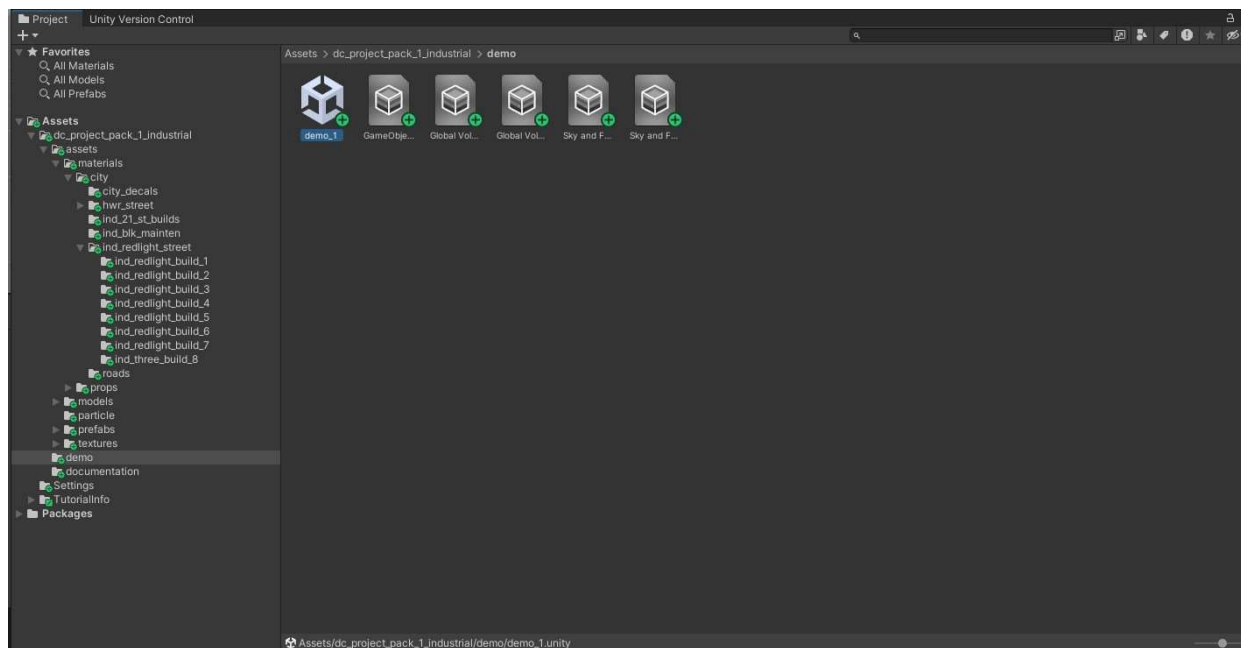

Installation

I will create a new project specifically for URP, and then in the window I will select any of the four scene options. I will select "Standard (URP)"

A stage appeared, completely empty

You can download the main asset "Default City Pack 1 industrial" from the "Package Manager"

Download and then import

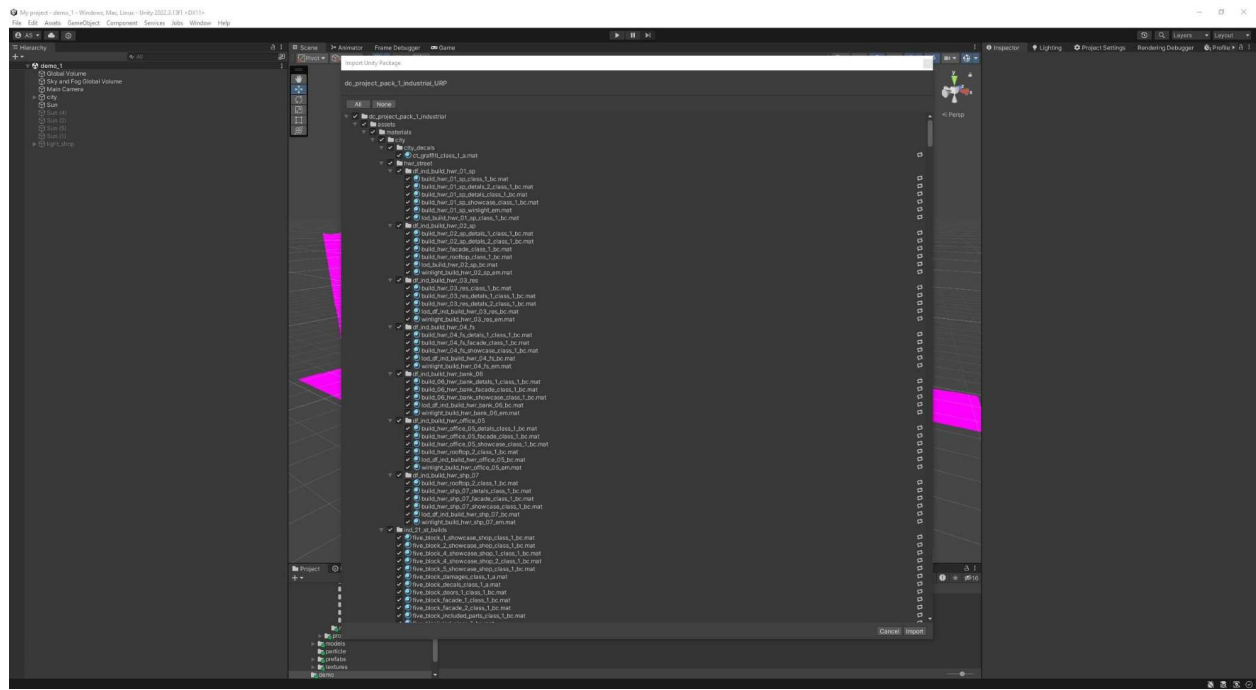

Open "demo_1" and see the following

We see a completely broken scene, everything is gray and pink, most of all it looks like my life!

To fix this mess, let's use my asset, which was specially created for URP
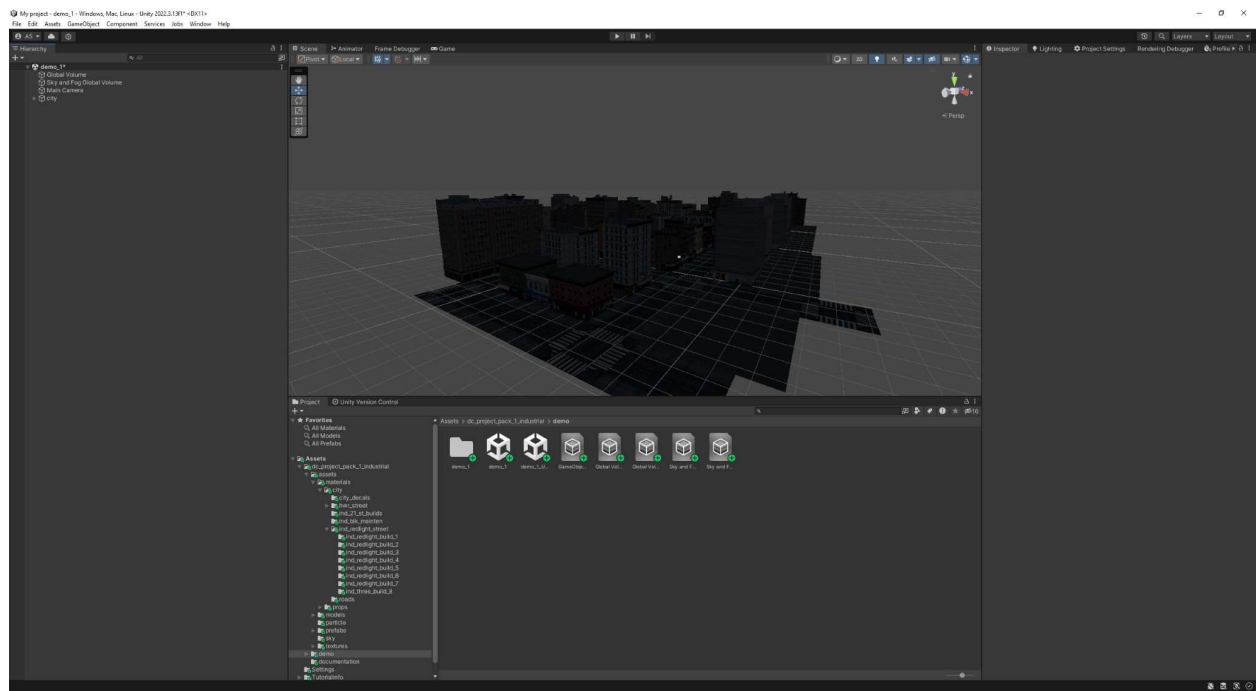

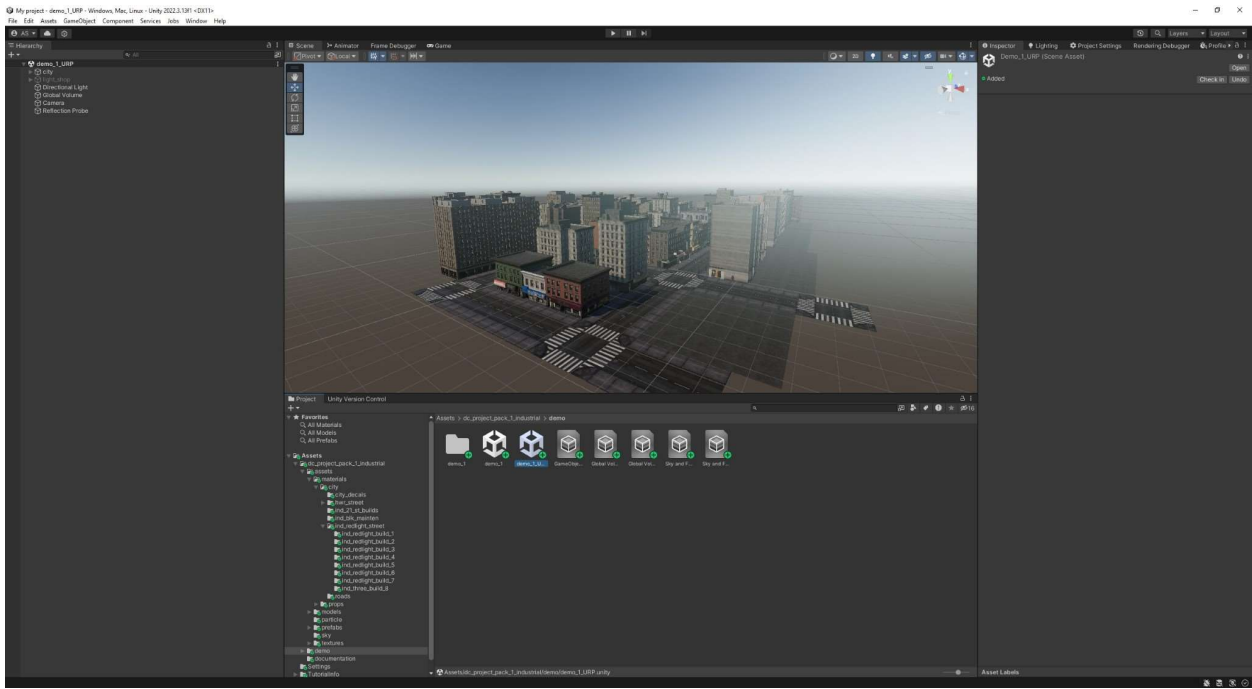

You can also download it from "Package Manager"

But I have "*.unitypackage" on my disk

Therefore, I simply drag it from Explorer into Unity 3d and import everything

After everything has been imported, run "Demo_1_URP" the scene is located in the "demo" folder

All is ready)
